MACHINE LEARNING ASSIGNMENT 3

1. d)
2. d)
3. c)
4. b)
5. d)
6. c)
7. d)
8. a)
9. a)
10.   b)
11.   a)
12.   b)
13.   Clustering is important because it can efficiently address variety of problems and objectives, from the simplest ones to also the most difficult ones. Clustering is also very beneficial in data mining. Different customer types can be clustered into a group based on various factors like purchasing patterns, etc.
